

## AUSSIE WILDLIFE COURSE

The Aussie Wildlife Course is an introductory course developed to train enthusiastic members of our community to provide emergency care for sick, injured or orphaned native wildlife. It also provides an opportunity to gain more experience and knowledge to help further employment opportunities e.g. vet nursing, zoo keeping or employment in other wildlife industries.

The course is presented by qualified Zoological staff with years of experience working with native animals and will provide practical sessions and information to guide you through the course. We do our best to ensure that all participants gain the maximum potential out of the program.

Currumbin Wildlife Sanctuary has been caring for sick, injured and orphaned native wildlife for over 50 years. We accept over 10,000 animals through our wildlife hospital each year and have an extensive knowledge of the latest rearing, rehabilitation and release techniques.

Throughout the course the activities set in the study guide provided will need to be completed, as well as a written assessment to be conducted at the end of the course.
